# Cron Expressions

# What is Cron Trigger :

A Cron Expression is a specially formatted string that tells Salesforce **exactly when a Schedulable Apex job should run**.
Instead of selecting time manually every time, Cron gives precise control over scheduling.

You can define:

- The exact **time of day**
- Specific **days**
- Specific **months**
- Whether it runs **daily, weekly, monthly, or yearly**
- Even advanced schedules like “First Monday of every month”

# Structure :

Salesforce uses a **7-part Cron format**:

| Seconds | Minutes | Hours | Day_of_Month | Month | Day_of_Week | Year |
|---|---|---|---|---|---|---|
| 0 | 0 | 10 | * | * | ? | * |
| (0-60). | (0-60). | (0-24). | (1-31 or * or ?). | (1-12 0r Jan - Dec) | (1-7 or SUN-SAT) | usually * |

thank you
